

Under the pier, homes and habitats

Suitable for KS 1 and 2. We again begin with a short introductory session that can be held in the classroom or on site at the pier, to introduce this subject. The workshops will then be half a day or 3-hour visit to the pier. Children will have the opportunity to then engage in three different activities allowing them to explore the marine environment around and under the pier, doing plankton trawling, learning crabbing techniques and using underwater cameras. They then have the opportunity to use microscopes and handheld lenses to further investigate what they have found.
